
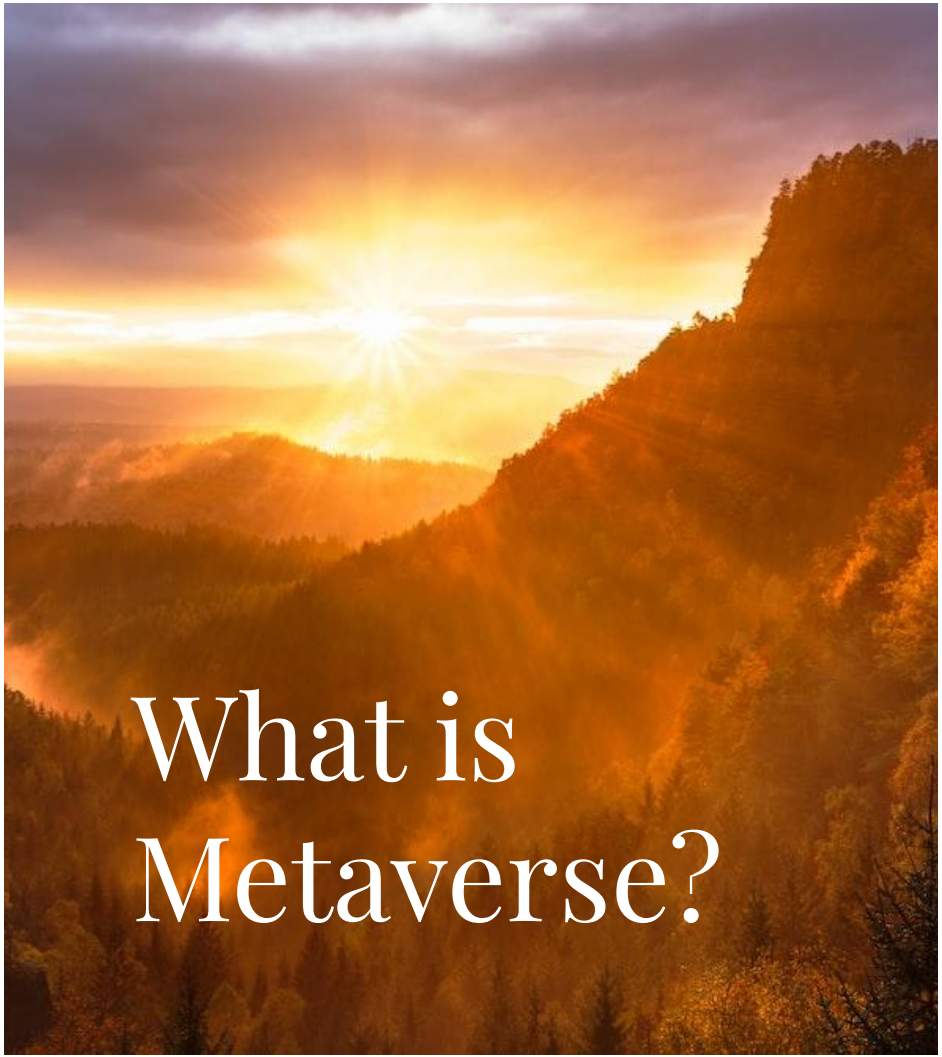
METAVERSE PRESENTATION

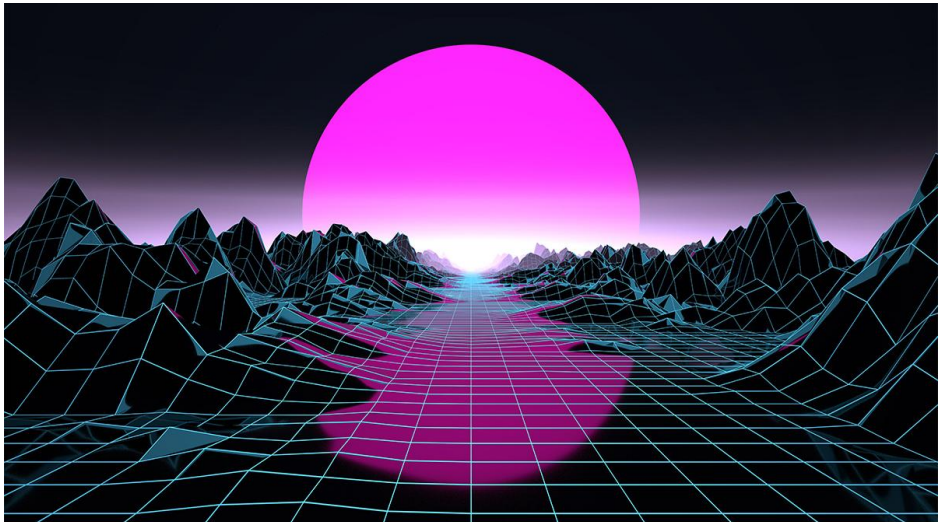
SEEMA JAVAID • OCT 2022



What is Metaverse?

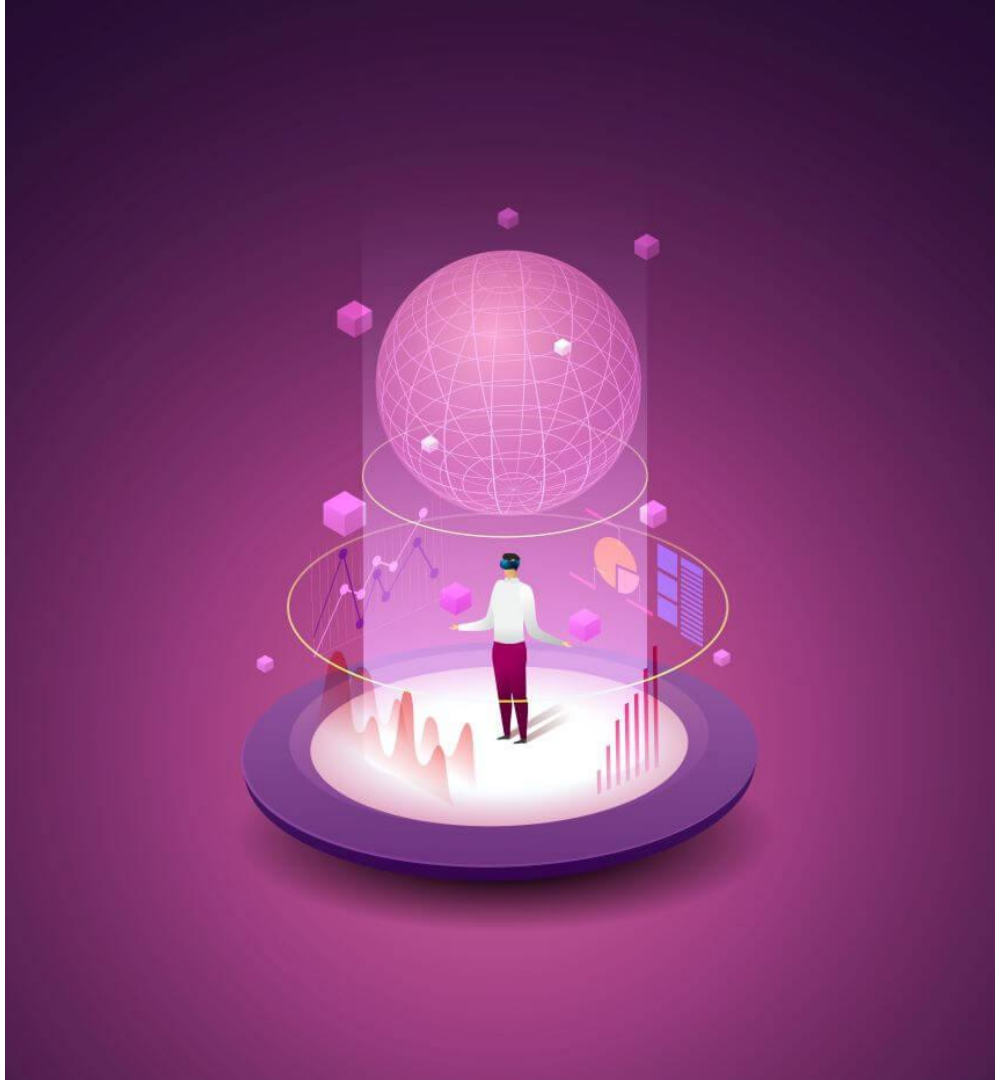
The metaverse is collection of all virtual worlds made using blockchain technology. It can be anything, gaming planets or NFT galleries.

The metaverse is not one place, it is collection of digital space. It is the next generation of internet.



Metaverse is one of the landscapes of web 3.0.

How the Metaverse Will Revolutionize Everything?



The metaverse offers a 3d environment which can be a virtual environment for special moments. Employees spread across the globe can meet up in the metaverse to come up with ideas.
It will also alter the education system. Student would have the choice to either physically attend the class or not. The teachers can meet the students from different locations as well.

What is required to build the Metaverse?

1. Internet for rendering virtual content, data transfer,graphics and communication.

2. Open programming language such as javascript, HTML, WEBXR and many others.

3. XR (extended reality)technologies like VR glasses for human interaction with virtual world.

4. Massive Computing Power for supporting AI related tasks.
